

## Clinical Development Specialist (f/m/d)

### Professional Skills

- Natural science/scientific background (HTL, FH, university)
- Experienced in clinical development, in particular in designing clinical studies, interpretation of clinical data and ideally in medical writing
- Profound GCP knowledge
- Experience in haematology and/or neurology is a plus
- Strong communication and presentation skills in English and German
- IT skills (Office 365, Adobe Acrobat, alternatively MS-Project)

### Ready for an ambitious job?

- You develop the design, synopsis, protocol, amendments and final reports for clinical studies
- You support regulatory interactions addressing questions and responses
- You prepare and contribute to scientific documents (e.g. clinical trial and submission documents)
- You maintain awareness of new developments within our core therapeutic areas building upon own expertise through attendance at congresses, seminars and meetings

### Able to align?

- You are involved in the identification of potential investigational sites and you support during trial conduct
- You present clinical data internally and externally (incl. publications)
- You participate in multidisciplinary project teams and you work with other functions in the assessment of new in-licensing opportunities

### Looking for an agile environment?

- You enjoy working in a high-performing international environment
- You prefer a high degree of independence and responsibility for assigned projects
- You are keen to manage multiple projects and being able to prioritize and self-manage

*The gross monthly salary provided for this function is a minimum of € 3.600.- based on full-time employment. Any potential overpayment depends on professional experience and qualifications.*
